

## Video Services

Oceanengineering® offers a unique real-time and historical view of remote operations using the most advanced live streaming video and archiving solutions available. We provide the hardware, software, networking, and communications services required to backhaul video from distant locations under harsh conditions, and to tag and archive it for subsequent analysis.

Improve Visibility and Historical Analysis with Oceanengineering Global Data Solution's Video Services. Oceanengineering simplifies remote video streaming and archiving, making it easy to view remote operations in real time and store petabytes of data in a searchable, indexed video archive. We offer the entire solution, from our rugged video cameras to all of the other elements and installation expertise that you need to capture and backhaul video, tag interest areas, and archive this valuable data source for future analysis.

- » See what's happening in real time, even in the most remote locations.
- » Tag interest areas and archive video to replay and analyze later.
- » View multiple video streams in one convenient display or your common operating picture (COP).

# Oceaneering Video Services

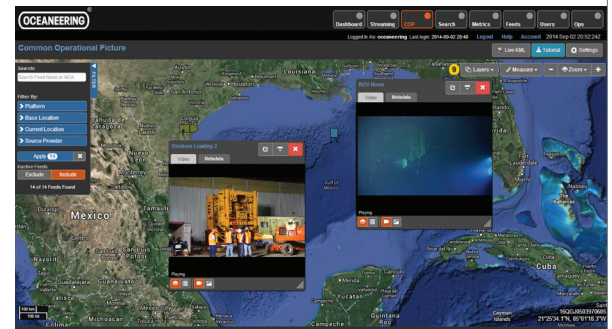

## Capture video with our rugged camera solutions

- » Oceaneering's explosion-proof video cameras provide a hardened solution for your most rugged environments.
- » Our solutions are ideal for oil rigs and other marine environments, including hazardous locations and difficult conditions.
- » We provide the image quality, performance and reliability you need to meet your most rigorous video monitoring requirements.

## View and manage video from a single, web-based portal

- » Everything happens in the Oceaneering Video Vault™ (OV2), our integrated, web-based portal.
- » Tag interest areas for subsequent analysis.
- » View multiple streams in one unified display.
- » Deploy your individual video streams within your Esri-based common operating picture (COP).

## Enhance safety and security, and even reduce labor

- » Learn how Oceaneering Video Services can help make your operations safer and more secure, while also driving efficiency improvements throughout your operations.
