

LARGE BORE PRESSURE STABS

DTS large bore stabs are available to meet customer specifications. Standard tooling includes ROV mateable stabs to 12-in. The 4-in low pressure stab is frequently used in suction pile systems as is the 6-in stab of similar design. Stabs can be designed for use with static or inflatable seals depending on application and customer limitations/requirements. The receptacles are also custom made for proper attachment to customer structures.
