

4000W SINGLE WORK LIGHT

HydroFlex now offers the SeaSun® 4000W Lamp as a single work light system. It is built with the same offshore durability as the SeaSun® 3 Lamp System but is designed with a very small deck footprint, and allows the diver to bring the light exactly where it is needed. It is a space and cost saving option to increase safety on dive sites.

The SeaSun Single ties into ship's power and creates its own isolated power supply that is monitored by an Isometer instead of a GFI. This type of ground fault protection constantly provides the lighting technician information about the safety of the system. This pre-warning feature prompts the technician to change out components before a fault occurs.

Isometer vs. GFI - Both are safe and will trip if a ground fault occurs.

Isometer - Detects a problem developing before it becomes a fault.

GFI - Immediately trips the system when a fault occurs. No warning.

Also available as a rental tool

Features

- 4000W arc light
- Color temp: 6,000 K (daylight)
- Output in Lumens: 380,000
- Equivalent to 16,000 watts of incandescent light
- 300 ft depth rating
- Isolated power supply with integrated resistance monitor
- Work light is compact and can be deployed and recovered by hand
- Allows divers to place the light right over the work site
- Rugged PVC cowling protects the light
- Greatly improves diver safety
- Work light conforms to UL Std. #1573 & CE Std. #EN60598-2-17
- Power requirements: 480 V AC ship's power or generator
