

GO-NO-GO GAUGE

Oceaneering's Go-No-Go gauges are used to ensure API maximum ovality tolerance is not exceeded prior to installation of a connector. This operation is critical to the proper sealing of many grip and seal type connectors. By using this tool, considerable time can be saved in the event the pipeline has been damaged in a way which will impede slips and/or packers from seating properly.

Technical Data / Specifications

Materials Of Construction

Aluminum (Anodized)

Stainless Steel

Weight in Air (Size Dependent)

18 in API Specifications ~34 lb

Dimensions

Height/Width/Height	Size Dependent
Standard Tolerance:	+ .000/- .030 on Diameter (18 in Size)

Features

Can be made to client/vendor connector specifications
