

# HARD LINE CUTTER

Oceaneering's Hard Line Cutter is a hydraulically-actuated manipulator-deployed tool designed to cut up to a 1 inch diameter wire rope. It consists of a hardened tool steel blade and side plates, a hydraulic cylinder, and a T-handle. The blade is attached to the cylinder ram between the side plates. One side of each of the side plates is open to allow the cutter to be placed on the rope. When the cylinder is extended, the blade acts as a guillotine, severing the rope between the blade and the side plates. The cylinder is then retracted to allow for the next cut.

Also available as a rental tool

## Technical Data / Specifications

Pressure	10,000 psi
Flow	1 GPM
Opening	1-5 in
Connection Type	HP Tube or Hose
Est. Weight	14 – 275 lb in air
