

SOFT LINE CUTTER

Oceaneering's Soft Line Cutter is a small hydraulically actuated, manipulator-deployed tool designed to cut up to 1 in diameter fiber rope or hydraulic hose. It consists of a hardened tool steel blade and side plates, a hydraulic cylinder, and a T-handle. The blade is attached to the cylinder ram between the side plates. One side of each of the side plates is open to allow the cutter to be placed on the rope. When the cylinder is extended, the blade acts as a guillotine, severing the rope between the blade and the side plates. The cylinder is then retracted to allow for the next cut.

Also available as a rental tool

Technical Data / Specifications

Pressure	650 psi max input
Flow	1 gpm max input
Opening	1 in
Connection Type	¼ JIC
Est. Weight	8 lb in air 6.5 lb in Water
