

SUBSEA TORQUE TEST JIG

The Subsea Torque Test Jig is for use in verifying torque tool readings subsea. The tool can also be used on the surface in place of a normal Torque Tool Test Jig, thus making it a versatile 2-in-1 piece of equipment. The Subsea Torque Test Jig readily attaches to the ROV Cage or TMS. It allows for a quick, easy assessment of your torque output when making adjustments to the tool without having to return to the surface. The digital readout gives an accurate and precise torque reading.
