

MANUFACTURING UMBILICAL SOLUTIONS

Oceaneering Umbilical Solutions (OUS) is the only major provider of subsea umbilical systems that manufactures the full range of pump, thermoplastic hose, hybrid, electric, power, fiber optic and steel tube umbilicals at each of its three strategically-located facilities worldwide – complete with the deepwater harbour and full load-out facilities required to service your project reliability.

Our Expertise

Reliability is most demanded when accessibility is least possible. Few umbilical providers can match the success rate of, and the knowledge and experience gained from, Oceaneering's base of installed subsea umbilical systems. Oceaneering regularly designs and manufactures umbilicals qualified for depths to 2,500m and ultra-deepwater research and development activities are underway for umbilical depths to 4,000m.

Oceaneering's worldwide, strategically-located facilities gives you the accessibility to work with OUS in any region. OUS is one of a select few umbilical providers with full manufacturing facilities and support centers in the regions where your projects are located.

Manufacturing Excellence

Strategic Manufacturing Footprint – Three strategically located manufacturing facilities – a total of 132,000m² – in Panama City (Florida, USA), Niteroi (Rio de Janeiro, Brazil) and Rosyth, (Scotland, UK).

World Class Assets – Oceaneering's facilities have the necessary planetary cabling machines, handling equipment, manufacturing assets, deepwater harbours and full load-out facilities.

World Class People – Investing in our people is critical to our success. Our people have a high level of experience and skill, which is required to produce engineering solutions. OUS continues to invest in our people and processes and we operate in a continuous improvement environment.
