

# Spool Piece and Jumper Metrology

Oceanengineering has decades of experience in performing surface navigation and subsea metrology. Specialized inertial and acoustic metrology techniques are used to accurately measure distances, elevations, and orientations of connecting surfaces of subsea assets including spool pieces and jumpers.

Calling on our highly-experienced, trained, and competent personnel, we have completed more than 300 spool piece and jumper metrology projects globally. Our robust procedures and processes ensure these activities are completed effectively, safely, and to your project requirements.
