

CP Probe

The CP Probe easily interfaces with the ROV, but can also be held by divers. It serves as either a tip-contact or proximity-style probe, and if ROV operators want to avoid connection to the umbilical, the ROV interfaces with "C Meter Readout", providing a self-contained, direct subsea readout, viewable on the ROV's video camera. Like all CP probes, they are fully field-serviceable, with plug-in electrode elements and interchangeable components.

FEATURES

Reading given in real time

Accuracy to ± 0.005 V.

Can be used in tip-contact or proximity mode

CP Probe

Technical data

Electrode elements:	2x Ag/Ag Cl pluggable, pluggable CuSO4 available
Deployment:	Diver, ADS or ROV
Readout:	Surface or deep-C-meter
Depth:	10,000 ft

Transport information:	
Transport case (L x W x H):	800 x 600 x 400 mm
Weight:	25 kg
